                                                                                                                                                                                                                                                               The present sequence is human alpha2B-adrenoceptor (alpha2B-AR) variant CC 298-309) of 12 9lutamates, in an acidic stretch of 18 amino acids canino CC acids 294-311, located in the third intracellular loop of the receptor CC polypeptide. The variant is obtained by deletion of three glutamates from CC chromosome 2. Alpha2-AR mediate many of the physiological effects of the CC catecholamines, norepinephrine and epinephrine. An antagonist of CC alpha2B-adrenoceptor is useful for treating a manmal suffering from CC vascular contraction of coronary arteries and a disease involving CC vascular contraction of coronary arteries which is clinically expressed CC clinically expressed as Prinzmetal's variant form or acute myocardial expressed CC clinically expressed as Prinzmetal's variant form or acute myocardial expressed CC infarction (AMI). Alpha2B-AR gene is used in gene therapy.

                                                    The invention relates to a method for detecting a risk of hypertension by determining the pattern of alleles encoding a variant alpha-2B-adrenoceptor (AR) protein. The methods and compositions of the invention are useful for detecting risks and targeting treatment for hypertension. The kit is also useful for selecting for clinical drug trials testing the antihypertensive effect of compounds. The present sequence is human alpha-2B-adrenoceptor variant.

                 The present sequence is human alpha2B-adrenoceptor (alpha2B-AR) protein. Alpha2B-AR has a glutamic acid repeat element (amino acids 298-309) of 294-311), located in the third intracellular loop of the receptor mediate many of the physiological effects of the catecholamines. Princephrine and epinephrine and epinephrine and antagonist of alpha2B-arroceptor is coronary arteries which is clinically expressed as coronary heat disease involving vascular contraction of coronary arteries which is clinically expressed as coronary heat disease involving vascular contraction of coronary arteries which is clinically expressed as coronary heat disease Prinzmetal's variant form or acute myocardial infarction (AMI).

                                                                                                         The invention relates to a method for detecting a risk of hypertension by determining the pattern of alleles encoding a variant alpha-2B-adrenoceptor (AR) protein. The methods and compositions of the invention are useful for detecting risks and targeting treatment for hypertension. The kit is also useful for selecting for clinical drug trials testing the antihypertensive effect of compounds. The present sequence is human alpha-2B-adrenoceptor protein.
                                                                                     Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
```

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity

CC or avidity for a particular GPCR. (1) can be used as GPCR modulators and CC in gene therapy. The antigenic peptides for GPCRs are useful in detecting CC antibodies. The peptides and antibodies are also useful for detecting the CC presence or absence of corresponding GPCRs. The antigenic peptides for CC GPCRs and antibodies are useful for diagnosing and designing drugs for creating immune-related diseases, growth-related diseases, cell CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, CC diseases, allergies, Crohn's diseases, disease, cell costeoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute costeoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute disease, parkinson's disease, disease, disease, graft versus host canxiety, depression, schizophrenia, dementia, mental retardation, memory hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode cc GPCR proteins given in AbB981675 to ABB92018, which are used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Clone NGC-alpha2beta was isolated from a human spleen genomic library by screening with a fragment of the human 5-HTLA receptor gene. The gene was used to express recombinant receptor protein which can be used to produce antibodies for inhibition of receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Fig 2; 15pp; English.

Proteins AAR48685-R48758 represent a range of G-protein coupled receptor proteins selected from cAMP, adenosine, muscarinic acetylcholine, adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   G-protein coupled receptor; ligand binding assay; transmembrane domain; psychotic disorder; schizophrenia; dopamine; cAMP; adenosine; thrombin; muscarinic acetylcholine; adrenergic; endothelin; bombesin; endocrine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human alpha-2B adrenergic receptor (AAW11804) is a member of the rhodopsin-like signal transducer family. Its amino acid sequence was deduced from a genomic DNA clone (AAR59499) obtd. from a human spleen DNA library. Vectors have been adapted to allow prodn. of alpha-2B adrenoceptor in bacterial, yeast or mammalian cells; transfected Ltk- cells, designated L-NGC-alpha-2B, are deposited as ATCC CRL 10275. Membranes of transfected mammalian cells can used in novel methods to identify drugs which specifically interact with, and bind to, the alpha-2B adrenergic receptor. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                     G-protein coupled receptor; ligand binding assay; transmembrane domain; schizophrenia; dopamine; cAMP; adenosine; thrombin; adrenergic; opsin; muscarinic acetylcholine; endothelin; bombesin; endocrine; rhodopsin; odorant; cytomegalovirus; serotonergic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder such as schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         odorant, cytomegaloviral and other G-protein coupled receptors. The receptor proteins were used to design polypeptides, pref. based on the transmembrane domains, for use in G-protein coupled receptor ligand binding assays. The polypeptide fragments retain biological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AR48759-R48758, ARR50569-R50807 and AR89189-R89195 for examples
                                                                                                                                                                                                            WPI; 1996-208785/21.
                                                                                                                                                                                                                                                                                        09-SEP-1993;

Proteins AAW02657-W02720 represent a range of G-protein coupled receptor (GPR) proteins selected from cAMP, adenosine, muscarinic acetylcholine, adarenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin, odorant, cytomegaloviral and other GPR proteins. The receptor proteins were used to design polypeptides, pref. based on the transmembrane domains, for use in G-protein coupled receptor ligand binding assays. The polypeptide fragments retain biological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AAW02741-W0299) for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering

comprising an NPXXY motif, and a carboxyl terminal tail which comprises a putative site of palmitoylation and clusters of phosphorylation, and a retained portion of a carboxyl terminal region of a GPCR portion fused to phosphorylation of the carboxyl terminal from a second GPCR, that comprises phosphorylation clusters and a putative palmitoylation site 10-25 amino acid residues downstream of a second NPXXY motif. The modified GPCR is useful for screening compounds for GPCR activity which comprises providing a cell that expresses at least one modified GPCR, where the cell further comprises arrestin conjugated to a detectable molecule, exposing the cell to the compound, detecting the location of the arrestin within the cell, comparing the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the compound to the location of the arrestin within the cell to the carbox within the cell to the carbo
                                                                                                                                                                                                                                                                                                                                                       Modified G-protein coupled receptor useful for identifying inverse agonist or antagonist of the receptor, comprises a terminal having one or more clusters of phosphorylation -
                                                                                                                                                                                                                                                                               The invention

The present invention describes a method for detecting G protein-coupled receptor (GPCR) pathway activity. The method comprises: (1) providing at least one cell expressing GPCR and conjugated proteins; (2) treating the cell with a test compound; (3) obtaining a digital image of the cell by detecting and measuring energy emitted from the detectable molecules; and (4) detecting the localization of some of the conjugated proteins at one of endocytic vesicles and endosomes. The method can be used for detecting compounds that activate GPCR-activity in vivo and in vitro, where the including photo-transduction, olfaction, neurotransmission, vascular come, cardiac output, digestion, pain and fluid electrolyte balance. The present sequence represents a GPCR amino acid sequence which is given
                                                                                                                                                                                                                                                                          Detecting G-protein-coupled receptor pathway activity comprises treating a cell having G-protein-coupled receptor activity with a test compound, obtaining a digital image of the cell and detecting position

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the cell in the absence of the compound and correlating a difference between the location of arrestin within the cell in the presence of the compound and the presence of the location of the arrestin within the cell in the absence of the compound. Preferably, the arrestin is detected in endosomes. The GPCR and a nucleic acid encoding the modified GPCR are useful for preventing and/or treating a disease associated with GPCR in mammals, such as angina pectoris, atherosclerosis, asthma, emphysema, rhinitis, inflammatory disease, rheumatoid arthritis, glaucoma, pain, obesity or Parkinson's disease, by modulating GPCR activity and affinity for arrestin. Sequences ABU67202-ABU67240 represent GPCR polypeptide

The invention relates to genotyping an alpha-2B, 2A, or 2C adrenergic receptor gene (I)-(III) by detecting a polymorphic site, comprising; (a) obtaining a sample having a polymorphic serie, comprising; alpha2A or alpha2C or fragment or complement of; and (b) detecting a polymorphic site comprising nucleotide positions 901-909 of (I), a site comprising cytosine or guanine at position 753 of (IIV) or a site comprising (A) (99996999050) or (B) (999969918) or (B) (999969918) or a positions 961-972 of (III). The method may be used for genotyping an alpha2B, alpha2A or alpha2C receptor gene and further used to determine whether an individual is at increased risk of developing a disease associated with alpha2B, alpha2A or alpha2, comprising detecting a polymorphic site which correlate to disease selected from cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            17-APR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          addition, the technique may be used to predict an individual's response to an alpha2B, alpha2A, or alpha2C agonist (e.g. epinephrine, norepinephrine, clonidine, oxymetazoline, guanabenz, UK14304, BHT933 and combinations of these) or antagonist (e.g. yohimbine, prazosin, ARC 239, rauwolscine, idazoxan, tolazoline, phentolamine and combinations of these) by detecting the polymorphic site and correlating the site to a predetermined response (where the response is correlated to adenylyl cyclase, MAP kinase activity, phosphorylation or inositol phosphate levels). The present sequence is that of the human alpha-2CAR variant protein, deleted for a 4 amino acid polymorphic site at residues 321-324 of the wildtype protein (AAMS2124).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          drugs.
                                               ARQ64890 encodes the amino acid sequence of a polypeptide (ARR54834) that constitutes human derived adrenaline alpha 2CII receptor. The DNA can be used for the study of the pharmacological importance of the gene expression in humans.
                                                                                                                                                                              Claim 1;
                                                                                                                                                                                                                                 screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            06-MAY-1994
